

Seed mats

NEW

An easy to use method which is both
fast and effecient

100% biodegradable cellulose mats with flower seeds which will flower in 4 to 6 weeks.

Sowing could not be easier, simply position the seed mat in the ground and lightly cover it with soil. There is no risk of putting down too many or too few seeds, because the mat contains exactly the right density (around 3-4 g/m²).

The cellulose matting allows humidity and heat to reach the seeds and is very beneficial for germination and the growth of young plants, whilst at the same time limiting the growth of weeds.

Dimensions:

0.33 m wide x 20 m long

Two mixtures available as flower mats:

- **A ground cover dwarf flower mixture**
Annuals which grow to a height of 20 to 30 cm and flower from June to October
- **A medium-height countryside mixture**
Annuals which grow to a height of 50-60 cm and flower until the first frosts at the beginning of November

METHOD:

- 1• Prepare the soil as you would when sowing grass seed
- 2• Unroll the flower mat
- 3• Cover with a fine layer of soil
- 4• Water reasonably and regularly in the first two or three weeks.
