

EAGLE GREEN CARE

The only CRD approved **nematicide** in the UK for protecting golf greens, soccer pitches and all sports and amenity turf

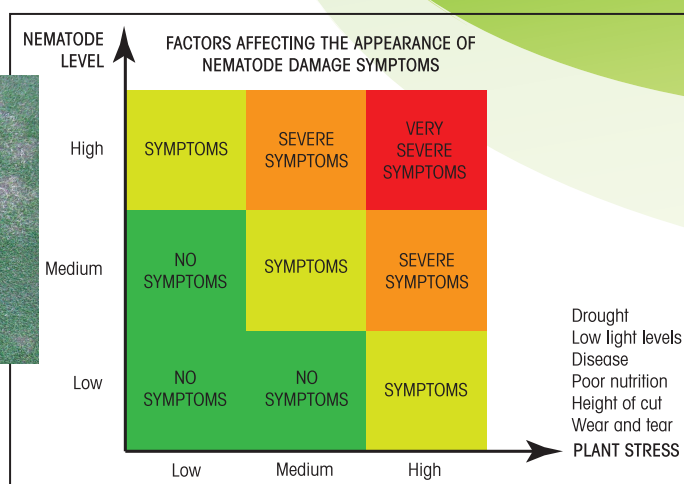

WHY EAGLE GREEN CARE

- Laboratory tests have shown rapid kill of all plant parasitic nematodes
- Significantly reduces ectoparasitic and endoparasitic nematodes in turf
- Available now in both liquid and granular formulations

The nematodes use their feeding spear (stylet) to pierce plant root cells and feed on cell contents

Product Detail

Contains: Polysulphides
 MAPP No: Liquid: 14989, Granule: 17233
 Pack size: Liquid: 5 litres, Granule: 20kg
 Pack coverage: Liquid: 2,500 sq.m, Granule: 833-1,666 sq.m
 RT order code: Liquid: 0525001/05, Granule: 0525001/020

APPLICATION RATES – Liquid formulation applied at 50ml/sq.m

Equipment	Eagle Green Care	Water Volume
Hand Sprayer/Watering Can	400ml	10 litres
Tractor Sprayer	Prepare at 4% v/v dilutions	

APPLICATION RATES – Granular formulation

Equipment	Eagle Green Care	Area
Rotary spreader	12kg	1,000 sq.m
Rootzone incorporation	24kg	1,000 sq.m

RECOMMENDED PERIOD OF USE

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----

Use plant protection products safely. Always read the label and product information before use

How Eagle Green Care works

Damage to sports and amenity turf by plant parasitic nematodes is a major problem. The symptoms are severe chlorosis, leading to turf loss.

Reducing nematode populations can quickly promote an increase in turf quality and performance. Currently **Eagle Green Care** is the only nematicide in the UK that is approved for use on sportsfields and amenity turf areas.

Eagle Green Care contains polysulphides which react with enzymes in animal cells and have a potent effect against insect eggs and plant parasitic nematodes. It kills all types of nematodes on contact.

The liquid formulation is applied as a drench to penetrate the turf surface where nematode-induced damage is apparent, or nematode population in soil exceeds the desired thresholds.

The granular formulation, when applied during seeding or on established turf, must be irrigated-in to activate its ingredients. This ensures longer term activity. Alternatively, the granules can be mixed with the root zone during construction.

If in doubt seek expert advice from your local Rigby Taylor representative.
