

SPRING SOWING

# Chameleon

- ✿ Perfect for environmentally stressed sites
- ✿ Strong, vibrant contrasting colours
- ✿ Long flowering period

Perfect for hot, dry sites, such as south facing wall and fences, **Chameleon** is also particularly useful for kerb edging where regular grass strimming would otherwise be necessary. It is not suitable for shade.

Poppies and Scented Mayweed give a light, airy feel to this mixture, later succeeded by the deeper, vibrant colours of Wallflower and Californian Poppy.

The flowering display of **Chameleon** will be full of surprises as different soil types and micro-climates, will favour some species over others. It is for this reason that 16 species and varieties have been included to ensure it will adapt and thrive in the local habitat.

## Chameleon Characteristics

Pack size: 1 kg  
Sowing rate: 2.5-3.5g/sq. m  
Pack coverage: 286-400 sq.m

### 16 SPECIES
