

Honey

- ✿ A favourite for bees and insect life
- ✿ Bright colours throughout the flowering period
- ✿ Encourages biodiversity within an urban landscape

Honey is a favourite with bee keepers, farmers and orchard owners who want to keep pollinating insects busy in between crop flowering times. **Honey** germinates quickly and plant growth covers the soil rapidly.

Borage is a particular favourite of honeybees and bumblebees with a succession of delicate blue flowers and Cosmos, an annual in various hues of pink, purple and white flowers well into autumn, is rarely seen without an insect of some sort around its stamens.

Honey Characteristics

Pack size: 1 kg
Sowing rate: 2.5-3.5g/sq. m
Pack coverage: 286-333 sq.m

12 SPECIES

Including Wall Rock Cress, Borage, Cornflower, Cosmos, Blanket Flower, Black-eyed Susan
