

Save your surface this winter

...with Tetraploid Technology

- * High energy seed – allows rapid germination in cool temperatures
- * Doubling of cellular chloroplast – increases chlorophyll production for fast shoot recovery
- * Robust, upright re-growth – extended seasonal performance
- * Stronger, deeper, denser root system – provides greater stabilisation
- * Exceptional stress tolerance against turf diseases – particularly Microdochium Patch
- * Depth of colour blends with existing sward – offers excellent presentation

Transitional seeding and divotting with the latest Tetraploid cultivars is now available with R140, Super Root, and the ultimate cool temperature performer R314 Rye. These exceptional grass seed mixtures from Rigby Taylor are ideal for seeding and repair of sports pitches, golf tees, walkways and embankment stabilization.
