PADDOCKS

Horse Master Paddock Mix

Horse Master Paddock Mix is especially designed to produce a nutritious, palatable and persistent paddock. A correct seasonal growth pattern enables it to be used for grazing with the option of shutting up to produce horse hay if required. Timely sowing for example, after weed control, will help promote a healthy, sustainable sward.

The Mixture

4.5kg	Intermediate diploid ryegrass
3.0kg	Late diploid perennial ryegrass
2.5kg	Late diploid perennial ryegrass
1.0kg	Timothy
2.0kg	Strong creeping red fescue

Applications	Horse and pony grazing, high fibre, nutritious, palatable grasses, low sugar (fructan) helps avoid laminitis
Sowing Rate	13kg per acre (32kg per hectare)
Sowing Depth	6-12mm
Pack Size	13kg
Mowing	Graze during the growing season, can also be shut off in mid-summer to produce a good hay crop

Agricultural grass seed mixtures designed for cattle grazing are rich in protein and sugars. Horses and ponies however, require grass which is high in fibre, with low sugar (fructan) levels. Using a blend of low sugar diploid ryegrasses with Timothy and strong creeping red fescue, and without clover to avoid laminitis, will produce an easily digestible paddock sward.

The way in which cattle graze differs considerably from horses and ponies; cows use their tongues whereas horses and ponies use their lips, enabling horses and ponies to graze a pasture down much shorter, leaving a stubble height of 1-2cm. This short grazing slows and reduces re-growth, making it easy for unwanted annual meadow grass and weeds to ingress into the sward. The lifespan of such an intensively grazed pasture would be very short however, seeding a dedicated paddock mixture at the recommended rate means a dense, nutritious pasture can be maintained.

Pack Size:
13kg (1 acre Pack)
