In pursuit of

This annual brochure has for many years been the 'go-to' publication for professional turf managers when seeking to source and apply the very best products for the health, protection and sustainability of natural sports and recreational surfaces.

It is also the first publication that has been produced under the management of **Origin Amenity Solutions Limited**, a major investor in the amenity industry and a company that has a commitment to excellence through the identification, development and supply of Rigby Taylor's innovative products and services that have revolutionized the health and playability of the UK's sporting and recreational surfaces.

The results achieved by practicing turf professionals are regularly viewed by huge audiences on TV and at major sporting stadiums. However, of equal importance is the supply and support for the lower leagues and at grass roots level, to enhance the playing experience and skill development for the next generation of sports men and women.

These situations and more benefit from the supply, advice and application of Rigby Taylor products, all of which provide a wide choice for all surfaces, seasonal use and available budgets.

Innovation is Key

Origin Amenity Solutions has recognized that the climate is changing, customer expectations are changing and therefore changes must be made to meet these challenges. To that end, an exciting new **Turf Science & Technology Centre** has been created with one clear aim. To provide the industry with innovative, inventive and above all relevant products and solutions to meet the challenges of tomorrow.

The Turf Technology Centre, based in Essex, employs its own R&D Manager and technicians to undertake in-house research, development and field trials to identify, assess and demonstrate the benefits of both existing and future products and technologies under UK conditions and practices. In addition to extensive trial plots, a **Rain Bird** irrigation system is installed as is a **Davis** weather station and below ground **Soil Scout** digital soil monitoring.

In addition, the group can call upon the expertise from other parts of the Origin group including fertilizer manufacturing, speciality product formulation and supply, line marking machinery and paint manufacturing.

Products for all seasons, reasons and situations

excellence.

Field trials at the Turf Science & Technology Centre in Essex

Advanced Technology

Skill, knowledge and expertise are the hallmarks of Rigby Taylor's industry presence. From its early pioneering of robotic line marking technology, for which the company was awarded the **IOG Innovation Award**, the company is now the leader in both GPS autonomous robotic line marking systems and walk-behind machines such as the **Premier** spray marker. All partnered with the award winning **Impact** line marking paint.

The TLM robotic markers now have over 50 sport surface templates allowing lines to be marked out faster and more accurately than pedestrian markers; they include all football and rugby size pitches, American football, tennis, cricket and athletic fields including multi-lane running tracks.

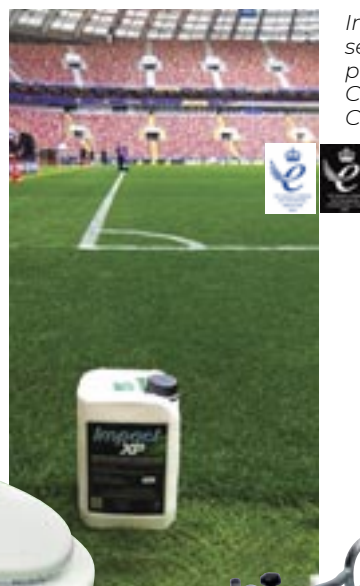

And, as well as faster more accurate lines, Impact award

winning paints have revolutionized the ready-to-use pitch line marking with whiter brighter and longer lasting lines... ..at a pitch marking cost lower than competitors.

Industry Support

The company has strong links with sporting bodies such as the FA, RFU and ECB along with industry organizations representing professional turf practitioners throughout the UK such as BIGGA, IOG and BALI.

Such support has seen the company sponsor industry awards that recognize the achievement of those that work within the profession. This includes sponsorship of IOG Young Groundsperson of the Year, and BIGGA Greenkeeping Championship Team Performance of the Year.

Impact award winning paint selected to mark the pitches at the 2018 FIFA World Cup and the 2020 UEFA Champions League finals

The IOG (GMA) Award for pioneering robotic line marking technology
