

# KATOUN<sup>®</sup> GOLD

MAPP: 17879

An emulsifiable concentrate formulation containing 500g/L fatty acids: pelargonic acid

Katoun<sup>®</sup> Gold is a natural weed management solution. The active ingredient, pelargonic acid, is plant derived. It quickly degrades into natural elements and has no residual action.

Katoun<sup>®</sup> Gold is a contact herbicide with approval for control of a range of broad-leaved and grass weeds (see label for approved list).

## **Field Horsetail** (*Equisetum arvense*)

Field Horsetail is an invasive deep-rooted perennial weed, which can spread quickly with fast growing rhizomes .

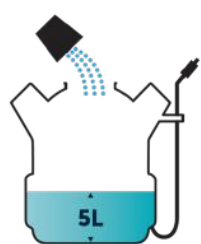

The problem — deep roots (more than 2m below ground) which make it difficult to remove and control. Manual digging can make the problem worse.

The waxy outer layer makes it difficult for chemicals to penetrate the leaf cuticle.

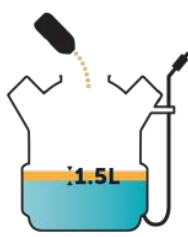

# natural & fast

- Trials have shown Katoun® Gold is active on Horsetail foliage, but not rhizomes. Best results in trials were seen with repeat applications.
- Katoun® Gold can be applied up to 4 times per year.
- Effects can be seen within 2 hours of treatment.
- Katoun® Gold works by contact action so, when used in shrub beds, careful application (spray shield) is required to ensure only the target weeds are sprayed.

Fill tank with 5L of water

Add 1.5L of Katoun® Gold to the water +/- 10g Chikara (10% of 15 litres)

Agitate thoroughly and add the remaining 8.5L of water

Agitate regularly
