

# Golf Courses & Bowling Greens

## GOLF TEES & THE GENERAL AREA

### Pure Fescue

#### 100% fescue blend

This high shoot density blend of five sub-species of fescues gives great salt tolerance and strengthens recovery from drought. With strong creeping red fescue for faster establishment, the genetic colour of this multi fescue blend gives greater consistency summer and winter.

#### The Mixture

20%	Quatro	Sheeps fescue
20%	Dumas 1	Hard fescue
20%	Hastings	Strong creeping red fescue
20%	Absolom	Slender creeping red fescue
20%	Greensleeves	Chewings fescue

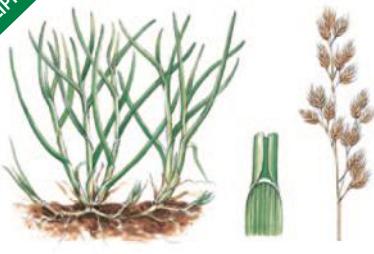

Sowing Rate: 20-30g/m<sup>2</sup>  
 Overseeding Rate: 10-20g/m<sup>2</sup>  
 Sowing Depth: 4-6mm  
 Mowing Height: Down to 7mm

#### The Cultivars

Quatro	Outstanding shoot density and tolerance to Red Thread, good salt tolerance
Dumas 1	Excellent drought, salt and shade tolerance
Hastings	Fast establishing with rhizomatous recovery
Absolom	Best in class for visual merit with high tolerance to Red Thread disease
Greensleeves	High shoot density, good winter colour, early spring green-up, high salt tolerance for the species

TGS 2022	Shoot Density	Red Thread	Visual Merit	Winter Green	Summer Green
Quatro	8.6	8.1	8.0	6.7	6.9
Dumas 1	6.0	6.2	5.9	6.7	5.9
Hastings	5.7	4.8	5.8	5.2	5.4
Absolom	7.6	7.8	7.6	4.5	5.2
Greensleeves	7.4	6.8	7.3	6.2	6.1
Mean score	7.0	6.7	6.9	n/a	n/a

CULTIVAR CLIPPINGS

#### SLENDER CREEPING RED FESCUE

*Festuca rubra litoralis*

High shoot density and tolerance to close mowing makes slender creeping red fescue particularly suitable for golf greens, tees and fairways. Producing short rhizomes, it can help regenerate worn areas to maintain a dense sward. Prefers moderate to higher pH up to 7.5 and has also has good salt and moderate shade tolerance.

#### Where to use

› Golf tees and the general area including fairways and roughs, in particular coastal, links and heathland courses where sheep's fescue naturally flourishes

#### How it performs

- › Increases sward density, drought and salt tolerance
- › Improves tolerance to Red Thread
- › Genetic colour gives greater consistency summer and winter
- › Tolerant of shade and a wider range of pH
- › Early spring green-up and recovery
- › Sow at 10g to create open, playable deep roughs
- › Multi-fescue species for attractive fescue flower heads for deep roughs
